## Connection to Engineers Without Borders UK

I have volunteered with Engineers Without Borders UK on several occasions. A few years ago, I supported the Member-Led Partnerships by reviewing applications and was involved with the Brighton University chapter. More recently, I contributed as a reviewer for the 'Engineering for People' Design Challenge this year and the 'Reshaping Engineering' Design Challenge last year.

---

## Skills and expertise

In addition to volunteering with EWB UK and other charities, I bring leadership and international experience as a former chapter president and overseas fellow with EWB Canada, where I worked in Northern Ghana. My background combines degrees in civil engineering and international development, with professional experience in the Global South on development and humanitarian projects spanning global health, affordable housing, water, sanitation, and renewable energy. Currently, I work on UK Aid-funded humanitarian projects and have undertaken missions with Doctors Without Borders in Ethiopia, Uganda, and DRC.

---

## Motivation for running

I am passionate about empowering engineers to drive sustainable development, and I want to leverage my international experience and expertise to help guide EWB UK in achieving its mission of creating a more sustainable and equitable world through engineering.
